Installations without compromise

“ What our clients say about us ”

Admiral Ventilation & Maintenance is a Limited Company that is dedicated to providing a prompt, quality manufacturing and installation service to the mechanical industry. We believe that through our years of experience we can offer a comprehensive service to all our clients, from the start, to completion of your project.

We have project managers and site teams that pride themselves on ensuring that this service is delivered without fuss, and that the project runs smoothly, with client requirements foremost in our minds.

Our estimating team will work enduringly alongside clients to ensure that we are fully compliant to your requirements. A 'prompt' and 'very competitive' quote will be returned, which gives you the best opportunity of securing targeted projects.

Our Quantity Surveyors will work closely with you so that all detailed information will be available at your disposal, protecting you from any 'unwanted financial surprises'.

Admiral Ventilation and Maintenance Ltd will undertake all size projects approaching them all with the same positive attitude of 'going the extra mile'.

Trevor Jones | Managing Director

‘Experience and attention to detail ensures the smooth running of every project’

### Fire Rated Systems

We supply and install FFC coated fire rated ductwork systems, which are designed to be used as normal ventilation ducts, smoke extract/outlet ducts and kitchen extract duct systems. These systems are offered as a 2 hour or 4 hour option, insulated or non-insulated and fully conform with the industry standard BS476: Part 24: 1987 (ISO 6944:1985).

Currently testing to BS EN1366 standards for forthcoming industry changes.

On completion of these systems a conformance certificate will be issued to include within O&M manuals, and to satisfy Building Control requirements.

### Plant supply and installation

Suppliers and installers of all ductwork components, including all types of dampers and associated actuators.

We install all types of plant equipment such as AHU's, VAV units and high specification displacement columns/units.

Based upon a clients design we can also supply a range of plant equipment which includes fans, attenuators and 2nd fix grilles and plenum boxes.

### Stainless Steel systems

Suppliers of Stainless Steel systems which are installed to client specifications and industry standards. This includes the supply and installation of all associated dampers, required for air balancing and fire control.

### Standard Galvanised Duct

Manufacture and installation of low, medium and high pressure galvanised ductwork systems conforming to DW144 specification and installation guidelines.

These systems include rectangular, spiral and flat oval ductwork, which can also be provided with a decorative powder coated finish or protective finish for external applications and installations within a corrosive environment.

### UPVC Extraction Systems

We also supply and install UPVC plastic fume extract ductwork systems and the relatively new fabric ductwork systems. These are all supplied and installed to the industry standard DW154 by our fully qualified and skilled site teams.

“ Admiral have been our ductwork company of choice for many years now. They are cost effective, quality driven and above all adaptable and flexible to the changing demands of the construction industry. ”  
Danny Leonard | Managing Director | Mitie Built Environment

“ We have worked with Admiral Ventilation on numerous projects for the last five years and have found them to be very professional and provide an excellent service. We would highly recommend Admiral Ventilation for any project, their performance has been excellent. They have worked directly with us and through HVAC Main Contractors. ” James P Horan | Director of Construction | Broadgate West Ltd

“ I have worked with Admiral Ventilation for over 5 years and found them an efficient and reliable ductwork contractor. They work in a very proactive way, from the point of appointment through to completion of the project. If co-ordination issues arise, they work with the team to resolve the issue with no detriment to the design or programme. Admiral's installation is always of a consistent high quality finish and they continue on a project by project basis to meet my expectations. ” Martin Forrester | Services Manager | Overbury

“ We have recently completed a high profile project with Admiral Ventilation. The project required an advanced specification install due to the services being on show across seven floors of office space. Without the experience of Admirals site team and their supporting management, the project would not have achieved the critical programme and budgetary requirements set by the professional team. As a direct result of their efforts, all targets were achieved leading to high praise from all. ”  
Mark Kadir | Director | Oasis Building Services Ltd
